

See everything, everywhere, in real time.

The intelligence layer for CPG retail

BACKED BY

8VC

Google

PRE-SERIES A

| \$3M RAISE

| APRIL 2026

Two channels. One has data. One doesn't.

The CPG world splits into two kinds of retail. Decades of infrastructure built one. The other is still completely fragmented.

MODERN CHANNEL

DENSE DATA

Supermarkets, chains, organized retail

Decades of data infrastructure. POS systems. Supply-chain software. Nielsen reports. Every transaction tracked.

GLOBAL VALUE

\$6T

PLAYERS

Walmart · Costco · Carrefour

TRADITIONAL CHANNEL

LOW DATA

Independent, small-format stores

No POS. No scanner. No integrated inventory. The dominant format across LATAM, Africa, and Asia — where most of the world actually buys groceries.

GLOBAL VALUE

\$2T+

PLAYERS

Bodegas · Kirana · Warung · Dukas

Traditional channel is the world's largest **unmeasured** retail ecosystem.

Millions invested on both sides. Never in the room at the same time.

PRIMARY: SENSORY DATA

What's happening on the shelf **right now**.

SMART SHELVES

SMART COOLERS

IOT DEVICES

IMAGE RECOGNITION

STORE SURVEYS

STORE AUDITS

●
NO UNIFIED LAYER

?

SECONDARY: SYSTEM DATA

What systems reported **last month**.

SELL-IN / SELL-OUT

POS DATA

PROMOTIONAL DATA

RETAIL MARKET DATA

RETAIL NETWORK DATA

NIelsen

Brands invest in both. Shelf-level data. Sell-in/sell-out reporting. Syndicated feeds.
Within each channel, two data ecosystems operate **entirely in isolation**.

Brands are making billion-dollar decisions on **20%** of the data.

UNMEASURED SALES

\$2T+

Annual CPG sales flowing through small, independent stores — with zero integrated data.

STORES WORLDWIDE

~50M

Bodegas in Mexico City. Kirana in Mumbai. Warung in Jakarta. Dukas in Nairobi.

SHARE OF CPG SALES

60–80%

In LATAM, Africa, and Asia, the traditional channel carries the majority of volume.

Brands are running their business with one entirely disconnected market. Every year, this blind spot burns **\$1 trillion in CPG value.**

● TRADITIONAL CHANNEL

In traditional channel, institutional knowledge is **trapped data**.

The most valuable intelligence — seasonal patterns, store-level trends, competitive dynamics — lives only in the heads of field reps. Not in systems or databases. In memory. Field workers are the primary data collection mechanism, armed with fragmented apps, paper, and memory.

25%

Institutional knowledge lost and rebuilt every single year.

LATAM RETAIL WORKERS

72.9M

Currently the "data layer" for the region's CPG industry.

HQ DATA RESOLUTION

20%

Across 80% of the market — the definition of flying blind.

In modern channel, every system is an island.

Fragmented systems

Brands invested heavily in individual tools — route optimization, survey apps, planogram software, CRM. Without a central layer, every system talks to nobody.

Stale reports, old decisions

HQ reviews yesterday's data next week. Shelves change today.

No enterprise-ready data lake

Nothing in retail execution is structured for AI agents to operate on.

● WHY IT MATTERS

Why does this matter? Because of how you feel when your favorite ice cream is **out of stock**.

Every empty shelf is a market-share decision made without the brand in the room.

A shopper walks into a bodega in Mexico City. She wants a Magnum. The freezer is empty. She buys the competitor. The sale is gone. The brand doesn't know. The distributor doesn't know. The rep won't find out until next week — if ever.

Multiply that moment by 50 million stores, 365 days a year.

8–12%

Sales lost to out-of-stocks in traditional channel (vs. 2–3% in modern)

\$400–500B

Lost annually to execution failures at the shelf

0

Brands in the room when the purchase decision is made

Why does enterprise want Agents as a Service?

Enterprise spent 15 years buying software for every problem. Now they're drowning in it.

Software creates silos.
Intelligence dissolves them.

Every app solved one problem and created two integration problems. Agents operate across systems. No new dashboard, one connected layer.

Custom is finally scalable.

Before AI, "custom" meant consultants and 18-month builds. Agents configure to each brand's rules, each store's context, each market's reality. Dynamically and real-time.

The ROI model inverts.

Software sells seats. Intelligence sells outcomes. Enterprise doesn't want another tool their teams have to learn. They want results delivered to the people already doing the work.

"Enterprise has a data problem."

—CHAMATH PALIHAPITIYA, 8090

The companies that solve the data problem with intelligence — not more software — own the next decade.

The Era of Apps is Over

AI is eating software. The next era belongs to unified intelligent systems.

2010-2024

Software Era

Every business problem got its own application. Brands digitized — and fragmented. Silos multiplied. Integration became the full-time job.

2025+

Intelligence Era

Unified systems that run on connected data, learn from every interaction, and evolve as businesses evolves. One layer, infinite insight.

Wisy is the intelligence layer for retail execution.

One platform. Live intelligence from the shelf to the boardroom.

Capture Data

Vision + Voice turn every store visit into structured data — offline, on-device, in seconds.

Automate Workflows

Brand's business rules and KPIs run continuously against live shelf conditions. No stale reports or manual audits.

Act in Real Time

AI agents delivers revenue-ranked guidance to field teams before they leave the store. Online and offline.

We create agent-ready data.

We get enterprise ready for AI with the highest-quality data that agents can scale.

Primary Data Capture

IN THE FIELD

Wisy provides the Primary Data Layer (**Vision + Voice**) that digitizes your reps' institutional knowledge. We put a capture system in your field reps' hands that works the way traditional channel actually works — offline, on-device, real time.

Unified Data Synthesis

ON THE PLATFORM

All that primary data — **synthesized, structured, and unified** into a single source of truth. One continuous feed of what is actually happening across every store, every market, every visit.

Layering in Intelligence

IN THE FIELD & AT HQ

A single live data layer. Field reps get next-best-action in the aisle. HQ gets truth at the shelf, in real time. Category managers query the same data. The business can evolve rules with precision and speed.

Dynamic business rules, in real time, **for the first time.**

Business rules are a brand's IP. They're the proprietary logic behind how they make decisions at the shelf, built from years of hard-earned market knowledge.

THE PROBLEM

Like Mapquest, they're static.

WITH WISY

Like Waze, routes go **dynamic.**

THE RESULT

Rules that get smarter.

Wisy doesn't just validate business rules against the shelf; it finds what the rules are missing. AI evaluates detections across every store, surfaces patterns, and recommends changes that drive revenue. Brand competitive IP compounds.

All the data brought to the shelf before the rep leaves the store.

PLANOGRAM OPTIMIZATION AGENT

Photo in, corrected layout out. Detects violations against your business rules and generates the fix, not just the flag.

NEXT-BEST ACTION AGENT

Every task in every store, ranked by dollar impact. Your rep knows what to fix first before they leave.

PRICING AGENT

Pricing anomalies surfaced before they become margin issues.

PREVIOUS-BEST ACTION AGENT

Every unresolved task from the last visit, surfaced on arrival. Your rep closes open loops before opening new ones.

FIELD SENTIMENT AGENT

Every observation your team makes — out-of-stocks, competitor moves, store issues — automatically structured into events and rolled up into executive reports.

CHAT WITH YOUR DATA

Query your entire data ecosystem in natural language. Sell-in, sell-out, shelf compliance, competitive pricing. Answers in seconds, not analyst-weeks.

The first complete picture of retail execution. Ever.

A living, compounding understanding of every store - that gets smarter with every visit, and more valuable with every brand on the platform.

EXISTING DATA

Modern Channel

15-20%

Supermarkets, chains — clean data, but limited reach

+

PRIMARY DATA WITH WISY

Traditional Channel

80%

Bodegas, independents — primary data that has never existed before

—

UNIFIED DATA LAYER

100%

One schema, one format, one live view — across every channel, every store, every market

ONE UNIFIED VIEW. EVERY CHANNEL. EVERY STORE. EVERY MARKET.

Cross-channel visibility

See how pricing in organized retail ripples into traditional channel behavior in real time

Store-level benchmarking

Identify which traditional stores are outperforming their modern channel equivalents — and replicate what's working

Global strategy grounded

Boardroom decisions anchored in 100% of market reality, not the 20% you could see before

At the intersection of **\$1.9T** in unmeasured retail and **\$47B** in agentic AI.

The largest, most complex, and least digitized segment of global commerce.

TAM

\$47B

Agentic AI market by 2030 — Wisy is the vertical app layer for physical retail.

SAM

\$41B

AI in supply chain by 2032 — retail execution slice.

BEACHHEAD SAM

\$19–38B

Software opportunity against the \$1.9T traditional channel globally.

MACRO CONTEXT — THE LABOR MARKET

60–70%

Of employee time AI could automate (McKinsey)

460M

People in global retail — the workforce we amplify

Modern channel is the **lab**. Traditional channel is the **scale**.

The monopoly is in connecting both — something no incumbent can do.

START: \$200B+

Modern channel

Where data infrastructure already exists.
Embedded, validated, agent-ready. ~70% of
early revenue.

SCALE: \$490B+

Traditional channel

Arrive with unfair data advantage and
existing brand relationships. The larger,
harder, entirely unmeasured market.

CONNECT

One platform, both channels

Full visibility across the entire CPG world.
No one else can offer this.

RESULT: MOAT

Compounding data monopoly

Every store, every visit, every brand
onboarded makes the platform harder to
replicate.

LATAM IS OUR MINIMUM VIABLE MARKET.

The proving ground for infrastructure that scales globally.

Lindt

Currently working with and in conversations with enterprise leaders across LATAM. Traction is strong. We're expanding with existing customers: moving from single to multiple markets (\$1M -> \$3-5M unlock).

Currently six paths to channel-market fit. All running live.

CHANNEL PARTNERSHIPS: SOFTWARE

Embedded into existing enterprise stacks (SAP, Netsuite). Wisy becomes the intelligence layer inside the tools brands already use. No rip-and-replace.

CHANNEL PARTNERSHIPS: DATA

Integrated with secondary data partners (Teamcore, MC1). Combined: the largest POS data set in traditional channel LATAM. Our data + their distribution = compounding reach.

TRADITIONAL + MODERN CHANNEL

One platform across both channels. The unified view no one else can offer. This is the monopoly thesis in practice.

TRADITIONAL STANDALONE

Full-stack Wisy deployment in traditional channel. No existing infrastructure required. Proving this works at scale — expanding from one market to multiple (\$1M → \$3-5M unlock).

COOLER INTELLIGENCE

Hardware/camera POC (Sensify). MVP running. Opens the door to always-on shelf visibility without rep visits — a fundamentally different data capture model.

CATEGORY EXPANSION

Moving beyond food & beverage with P&G. Pet food, meats, household. Same platform, new aisles. Proves the intelligence layer is category-agnostic.

Revenue Forecast

This couldn't be built from anywhere else.

01

Access is the advantage

Silicon Valley captures 60% of global AI funding. We're embedded in the capital, talent, and research networks that LATAM-only competitors will never access.

02

Speed beats incumbents

A startup iterating weekly on AI models moves faster than any incumbent. Legacy competitors see this problem, but can't move fast enough to solve it.

03

Our proprietary stack is a moat

We've built proprietary retail execution pipelines — small language models, large language models, vision models, offline agents — on niche industry data, evolved weekly. The longer we run, the harder we are to replicate.

04

Backed by the right people

8VC, NVIDIA, Google, Coca-Cola Foundation, Kamay Ventures. Not just capital — strategic relationships that unlock the doors we need open.

Retail execution is the entry point. The **agentic economy** is the destination.

We're building the data infrastructure AI agents need to operate in physical commerce — globally.

NOW

Retail execution

Field intelligence, shelf visibility, perfect execution.

2 YEARS

Supply chain intelligence

Demand sensing, inventory optimization, predictive replenishment.

BEYOND (2030+)

Agentic data exchange

Agents transacting autonomously — exchanging data, triggering POs, settling contracts. The platform holding ground truth becomes the toll road.

Every data exchange passes through Wisy. That's not analytics — **that's infrastructure for how value moves through physical commerce.**

\$3M raise.

\$750K blended secondary. Building the connective tissue between channels — the infrastructure that creates the monopoly.

LEAD INVESTOR

8VC · CONTINUING

8VC led our seed. They're participating in this round.

With over **\$6B in assets** and a portfolio spanning infrastructure, healthcare, government, and logistics — including Palantir — 8VC brings deep expertise in building transformative, scalable companies.

A continued vote of confidence in Wisy's trajectory. Their investment connects us to a world-class network of founders, operators, and engineers shaping the AI-powered future.

8VC

USE OF FUNDS

Build the platform

The connective tissue between channels — infrastructure that creates the monopoly.

Customer acquisition: LATAM expansion

Compound modern-channel wins into the traditional-channel data advantage.

Enterprise security + compliance buildout

Meet the bar global CPGs and regulated distributors require.

Sales + GTM execution

Convert the active pipeline into recurring revenue.

The Journey to Agentics

AI that brings all data to the shelf in real time, and delivers revenue-ranked actions to field teams before they leave the store.
